ENGINEERING STORM DRAIN CERTIFICATION FOR TOOEELE CHILDRENS JUSTICE CENTER

Rachael,

Thank you for the opportunity to provide a fee proposal for the Storm Drain Certification at the Tooele Children's Justice Center in Tooele Utah. We have reviewed the information in drawing plans, and coordination emails. Based on this information, Great Basin Engineering is proposing to provide the following services:

Storm Water Verification Survey and Letter **\$1,800.00**

Great Basin Engineering will perform a verification survey of the recently constructed storm drain system and confirm that it was built per engineering design. A certification letter will verify that the inlet boxes, manholes and clean outs were constructed in the designed locations and that the adjoining pipe sizes were built per design plans.

TOTAL **\$1,800.00**

Fees are based upon previous site design experience and length of the design process. Additional consideration has been given to the anticipated site and building construction costs. GBE reserves the right to request additional fees should the scope of the project change significantly during the design timeframe.

Quoted fees are valid for a period of six months beginning at the date of this document. Great Basin Engineering reserves the right to alter its fee if this period has expired prior to the commencement of design work.

Any property or topographical surveys, traffic studies, environmental studies, geotechnical investigations or structural retaining wall designs are not included in our contract. Any off-site street design, utility plans or utility outfalls beyond the immediate frontage of the project will be handled as additional services.

Any Government agency permits are not included as part of this proposal. Additional services will be provided at our hourly rates in effect at the time the services are rendered, over and above our quoted fees. Additional services will be initiated only after written approval.

Reimbursable expenses will be remitted to the owner at direct cost. (Includes government fees, printing expenses, messenger services, mileage, etc.)

We are looking forward to working with you on this project and will do all we can to ensure the project moves along quickly and smoothly. Please call if you have any questions or if we can be of further assistance.

Sincerely,

GREAT BASIN ENGINEERING, Inc.
